

Emsisoft Anti-Malware Home

Award-winning antivirus and anti-malware software for Windows computers

Dual Engine

4-Layer Protection

Dedicated Support

FINDING AND REMOVING MALWARE

		Tech Remarks
Virus & Malware Scanning	Dual-engine scanner detects all types of malicious software such as viruses, ransomware, trojans, bots, keyloggers and more.	Two major scanning technologies: Emsisoft (A) & Bitdefender (B).
Fast Scanning	Dual-engine scanner scans faster than others that use only one.	Combination of scan engines at lowest possible level; signatures for double-detections are avoided for memory use optimization.
Rootkit Detection	Scans boot sectors and finds hidden rootkits in the operating system.	Uses direct disk access mode to read files in a raw format from hard disk.
PUP Detection	Alerts users of potentially unwanted programs (PUPs) that overload the computer with resource-hogging applications.	Commonly detected in browser toolbars, adware, and system manipulators.
Advanced Infection Cleaning	Smart operation processes ensures the safety and stability of the computer during system cleaning.	70+ autorun/loading points, restores default values.
Emergency Kit Maker	Create your own swiss army knife for scanning and cleaning infected third party computers.	Compile a fully portable on-demand scanner within seconds.

PREVENTING NEW INFECTIONS

		Tech Remarks
Award-Winning Real-Time Protection from Infections	Four-layered system including Surf Protection, File Guard, Behavior Blocker and Anti-Ransomware.	Layers are not interchangeable but instead complement each other.
Layer 1: Surf Protection	Blocks access to known fraudulent and dangerous websites.	Fraudulent as in stealing passwords (phishing) and dangerous as in spreading malware downloads.
Layer 2: File Guard	Scans all downloaded and executed files using millions of malware signatures.	3 modes available: Default (scan on execution), Thorough (additionally scan all newly created and modified files); and Paranoid (scan all files when read).
Layer 3: Behavior Blocker	Finds brand new malware by monitoring the behavior of all running programs.	Uses live cloud-verification with the Emsisoft Anti-Malware Network database.
Layer 4: Anti-Ransomware	Stops ransomware before it encrypts files.	Other anti-ransomware solutions rely on detection of repeated encryption, so your most valuable files may already be lost before they act.
Online Banking Protection	Blocks banking-related trojans that try to wipe your bank account.	A specialized feature of the Behavior Blocker that detects process manipulations of the browser.
Phishing- and Keylogger-Protection	Prevents stolen passwords for all types of online accounts.	A combined feature of all four protection layers.
Exploit- and System-Manipulation-Prevention	Ensures data integrity and validity of active programs.	Combined detection of code injectors, exe-patchers, hidden rootkits, autoruns, hosts changers, browser settings changers, group policy changers and invisible installers.
Settings for Advanced Users	Intuitive and highly customizable settings suitable for both beginner and experienced users.	Highly customizable; default settings are recommended for most users.
Browser Security	Adds an in-browser security layer that complements the Surf Protection. A browser extension for Chrome, Firefox and Edge that blocks bad websites without compromising your privacy.	Default settings are recommended for most users.

AWARDS & CERTIFICATIONS

CONVENIENCE

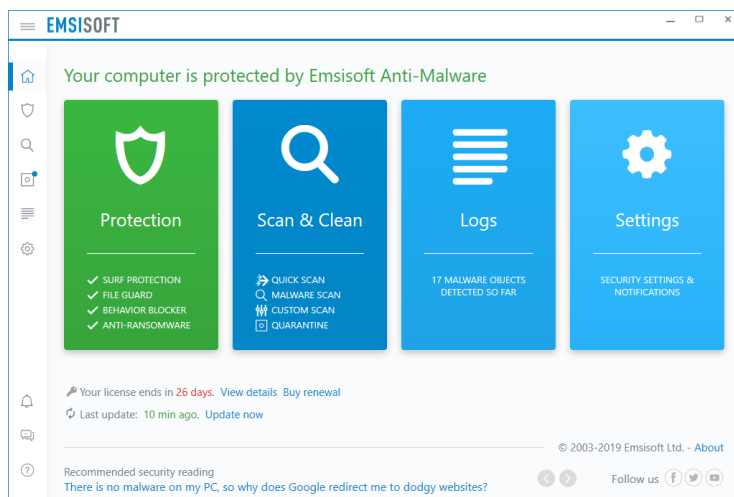

Tech Remarks

Silent Mode	Suppresses all notification popups and online updates when activated.	One-click activation via tray menu.
Automatic Updates	Detection signatures are updated at least 24 times a day.	Protection against more than 500,000 new threats and malicious websites is added every single day.
Scheduled Scans	Optional scan of the whole system at scheduled times.	You specify the time and date.
Emsisoft Anti-Malware Network	Optional live cloud-verification of detected threats to sharpen detection and avoid false alerts.	Database with more than 500 million known threats.
Quarantine	Keeps detected objects in a safe, encrypted locker for further investigation before they are finally removed.	Also allows you to submit files to Emsisoft for analysis.
Advanced Logging	Keeps records of all activities from real-time protection, scanner, quarantine and updates.	Helpful for support to reproduce situations.
Notifications	Option to receive notifications for your specified scanning events.	Huge advantage over Windows Defender, which does not provide notifications.
Permissions	Set an administrator password or restrict individual users from accessing specific features of the software.	Set default permissions for administrators and non-administrators.
Easy Interface	You don't need to be an expert to stay protected with Emsisoft, but experts love it too.	A beautiful, modern, simple and easy to understand user interface.
Privacy Conscious	This software does not send any user profile or private data to third-party servers.	Emsisoft is recognized as one of the most privacy-conscious antivirus companies by AV-Comparatives.
Certified Protection	Emsisoft Anti-Malware Home has earned multiple awards and recognition from independent international testing organizations.	Awards and certifications from Microsoft, OPSWAT, AV-Lab, Virus Bulletin, AV Comparatives and more.

DEDICATED BENEFITS

Tech Remarks

Malware Removal Guarantee	Dedicated malware experts will help you remove malware and virus infections in your computer system.	This service is offered at no additional cost.
Technology Guarantee	You automatically receive the latest version and updates during your active subscription.	Emsisoft doesn't just sell software – we are committed to keeping your computer clean.
Customer Focus	We believe that treating customers with honesty and respect, is the foundation of a sustainable business.	Our dedicated in-house support team are committed to providing only the best service to you. We do not outsource our support services.
Personal Assistance	Direct access to specially trained malware removal staff 24/7.	Email: support@emsisoft.com Forum: https://support.emsisoft.com Live chat: https://help.emsisoft.com

System Requirements

OS	Windows 7, 8, 8.1, 10 The latest service packs and updates are required.
HDD	~250 MB free space
RAM	Minimum 1 GB, ideal 2 GB+
CPU	Any x68 or x64

Important: Emsisoft Anti-Malware Home can only be installed on Windows desktops. For Windows Server systems, we recommend Emsisoft Enterprise Security.
